EDUCATION

Specialist, Computer Engineering

Dnipropetrovsk National University
2012 – 2013

B.S., Computer Engineering

Dnipropetrovsk National University
2008 – 2012

CERTIFICATIONS

Oracle Certified Associate, Java SE 8 Programmer

M101J: MongoDB for Java Developers

NEVCO HIPAA Certification Program

LANGUAGES

Ukrainian native
Russian fluent
English professional

SUMMARY

Lead software engineer who treats the business problem as the starting point — I dig into the domain, understand what the product does for its users, and shape engineering decisions around that. I also have a track record of building and scaling teams from the ground up, taking ownership end to end from shaping requirements through delivery and what happens after it's in production, and building teams that work the same way. I've done this across computer networking, security, finance, and healthcare domains — usually in cross-functional distributed teams. Beyond team-building, I design and implement scalable, highly maintainable backend systems, treating quality, security, and reliability as non-negotiable rather than an afterthought. My core expertise is backend engineering, but I'm T-shaped across the stack — comfortable in UI, SRE, and database engineering, on both cloud and on-premises products. I've consistently been rated a top performer across every project I've delivered.

KEY ACHIEVEMENTS & STRENGTHS

- Built and led **multiple engineering teams from formation**, defining the hiring bar, onboarding path, and day-to-day working practices.
- Led the migration of a Cisco product to a **new licensing model** spanning entitlement, enforcement, and the customer upgrade path, across two teams.
- Designed a high-load service exposing a **GraphQL-like query API** that translates into SQL against Vertica-backed firewall logs.
- Grew engineers into **independent decision-makers** who now own service areas of their own.

Team building & hiring Technical leadership Cross-functional collaboration
Mentorship & coaching Quality, security & reliability

SKILLS

Languages

Java Go Python JavaScript Groovy

Cloud & infra

AWS Lambda SQS Docker Terraform

Data & messaging

PostgreSQL MySQL DynamoDB Vertica MongoDB Elasticsearch Kafka RabbitMQ

Frameworks

Spring / Spring Boot React Angular Node.js Hibernate / JPA

Practices & tools

Agile / Scrum TDD / BDD CI/CD Git Jira

EXPERIENCE

Technical Lead SoftServe · client: Cisco May 2021 – Present
Alpharetta, GA · on-site at Cisco

Secure Email Threat Defense — cloud-based email security platform

- Built and led multiple engineering teams from formation, owning the part of the application portal responsible for configuration, policy, administration, and integration with other Cisco products.
- Designed cloud-native services built to scale horizontally, with security, resilience, and operational cost factored into the architecture.
- Negotiated scope, dependencies, and delivery timelines with tech leads and product owners across the platform.

Technical Lead / Team Lead SoftServe · client: Cisco	Jul 2018 – May 2021
Alpharetta, GA · on-site at Cisco	
Secure Network Analytics (Stealthwatch) — network visibility & threat detection	
- Formed a new 6–8 person team and set up its planning, code review, and release processes. - Led integration of a new licensing model across the product and delivered integrations with adjacent Cisco products. - Designed the technical solutions behind each initiative and reviewed designs produced by the team.	
Senior Software Engineer Playtika	Mar 2018 – Aug 2018
Dnipropetrovsk, Ukraine	
Mobile gaming platform — high-load microservices	
- Designed and implemented scalable backend microservices for a new game on Playtika's cloud gaming platform. - Took full ownership of feature delivery, production monitoring, and incident resolution.	
Senior Software Engineer SoftServe	Sep 2016 – Feb 2018
Dnipropetrovsk, Ukraine	
- Owned the tax-processing microservice within a multitenant billing and subscription platform. - Refactored undocumented legacy monolith logic into independently deployable services.	
Software Engineer SoftServe	Jan 2014 – Sep 2016
Dnipropetrovsk, Ukraine	
- Delivered backend and full-stack features across healthcare, education, and payments client projects. - Led localization of a US dental-practice management system for the Australian market.	
Grails/Java Developer SysGears	Nov 2012 – Dec 2013
Java Developer (Intern) Exigen Services	Sep 2011 – Dec 2011

Cloud Mailbox Security Solution

 SoftServe · client: Cisco · On-site Technical Leader · 5+ years

Python Go AWS Lambda Docker Terraform

An integrated email security solution that detects and blocks threats, gives customers full visibility through a search/reporting/tracking dashboard, and automatically remediates malicious messages. Built a brand-new team from scratch to create new features and enhance existing ones, designing technical solutions, translating business requirements into stories with product owners, and presenting demos directly to the customer.

Scope: started as tech/team lead for one ~8-person team; now lead a capability group of two teams (~10-12 engineers total), owning end to end the part of the application portal responsible for configuration, policy, administration, and integration with other Cisco products.

Secure Network Analytics

 SoftServe · client: Cisco · On-site Technical Leader · 2+ years

Java Spring Boot Vertica RabbitMQ Docker

On-premises network monitoring and threat-detection platform turning Cisco ISR routers into security sensors. Designed and led development of a new high-load service exposing a remote API with a GraphQL-like query language, converting queries to SQL and fetching firewall logs from Vertica. Separately led one of two teams migrating the product to a new licensing model, covering entitlement, enforcement, and the customer upgrade path.

Scope: led a 6-7 person team; coordinated with architects and leads across the platform on both initiatives.

Open Poker

 Personal project · Open source

github.com/aprey10/open-poker
Atlassian Marketplace ↗

Java Jira plugin

A Jira plugin adding lightweight Planning (Scrum) Poker directly to the issue view, designed, built, and published independently on the Atlassian Marketplace. The commercial edition was later acquired by Sngular (formerly TecnoFor); the free edition remains open source.

Scope: solo project — no team or PM; designed, built, and supported both editions independently.

Billing Platform

 SoftServe · client: Goreansverse · Senior Software Engineer · 1 year

Java Spring / DropWizard Hibernate / JPA MySQL PostgreSQL

Multitenant, cloud-based monetization and subscription platform billing customers worldwide, split between a core invoicing application and decoupled microservices for tax and discount calculation. Code-owned the tax-processing microservice and refactored complex, undocumented legacy logic out of the monolith.

Scope: 5-8 person team; close collaboration with on-site product owners to translate requirements into technical stories.

Mobile Platform Game

 Playtika · Senior Software Engineer · 5 months

Java Spring Cloud Kafka Docker

International cloud-based gaming platform for the mobile and social free-to-play segment, built from fast, multi-threaded microservices using standard patterns: service discovery, circuit breaker, centralized config, and containerization. Designed and implemented new high-load backend services and took full ownership of delivery, monitoring, and production incidents.

Scope: 7-person team; direct requirements clarification with product owners.
